

## Patent Claims

=====

1. Method for coating, in particular for painting, objects, especially vehicle bodies, comprising a plurality of parts which are initially separate and can subsequently be connected to one another, in which method the objects are guided on skids with the aid of a conveying system through at least one coating station, in which at least one application device is arranged,  
  
characterised in that  
  
at least one part (8) of the objects is guided through the coating booth (8) on its own skid (2') separately from the other parts (5, 6, 7).
2. Method according to claim 1, characterised in that the skid (2') on which the at least one part (8) is carried follows the skid or skids (2) which carries or carry the other parts (5, 6, 7) of the objects, through the same coating booth (8).
3. Method according to claim 1, characterised in that the at least one part of the object is led on its own skid through a different coating booth to the other parts of the object, the application devices in both coating booths being fed from a common paint supply means.
